EDUCATION

Carleton University

Bachelor of Computer Science

Ottawa, ON

Sep. 2021 – May 2025

- Relevant Coursework: Abstract Data Types and Algorithms, Database Management Systems, Fundamentals of Web Applications, Object-Oriented Software Engineering, Discrete Structures, Software Quality Assurance, Reinforcement Learning, Operating Systems, Computer Vision

TECHNICAL SKILLS

Languages: HTML, CSS, JAVA, C, C++, Python, JavaScript, TypeScript

Technologies/Frameworks/Database: Spring-Boot, React, Next.js, Node.js, GenAI, AI/ML, Express.js, Tailwind, Git, JUnit, Selenium, Docker, PostgreSQL, MongoDB

EXPERIENCE

Full Stack Developer

LandSeed

June 2025 – Present

Remote

- Designed and integrated scalable AWS S3 file upload solutions using Node.js and Express for secure media storage.
- Developed and maintained frontend components using TypeScript and React.js, improving image upload functionality and fixing bugs affecting user profile management.
- Refactored backend helper utilities to support batch file uploads, increasing upload reliability and developer efficiency.
- Collaborated with design and product teams to debug and implement UI/UX improvements, resulting in smoother user onboarding.

Software Development Intern

Mentra Inc

Jan. 2025 – May 2025

Remote

- Developed a responsive and user-friendly website using **Next.js**, based on designs provided in a **Figma** project.
- Collaborated with the design team to ensure accurate implementation of UI/UX elements and maintain brand consistency.
- Built and integrated backend services using **Spring Boot**, ensuring robust data handling and security.
- Managed source code and version control using **GitHub**, adhering to best practices for collaboration and deployment.
- Optimized website performance and resolved production issues to deliver a seamless user experience.

PROJECTS

Carleton Course Notifier | *Javascript, Node.js, PostgreSQL, Express, Puppeteer*

- Developed a full-stack web application that allows Carleton University students to register for notifications when seats in desired courses become available
- Implemented a relational database schema using PostgreSQL to manage users, courses, and registration records
- Implemented backend services with Node.js and Express.js to handle user registrations, course status tracking, and e-mail notifications
- Deployed the application using modern cloud services
- GitHub link: <https://github.com/vitcorr/carleton-course-notifier>

Kritique - AI-powered website review platform | *React, Tailwind, Python, MongoDB, GenAI*

- Integrated **Google Gemini API** to generate 30-word summaries of user reviews, cutting reading time by ~70% while preserving key insights
- Built a **Groq-powered comment validation system** that filtered profanity and unsafe content with 90%+ precision in testing, ensuring a safer review ecosystem
- Designed **prompt templates and structured JSON outputs**, improving backend parsing reliability and reducing AI integration errors by ~40%
- Deployed **Flask + MongoDB backend** with real-time AI inference, supporting scalable moderation and tagging for dozens of simultaneous review submissions
- GitHub link: <https://github.com/vitcorr/Kritique>

Game of Quests - Test Automation | *Java, JUnit, Cucumber, Selenium*

- Developed a quest-based game in Java, focusing on robust design and functionality
- Conducted unit and integration testing using **JUnit** and behavior-driven testing with **Cucumber**
- Built a web-based version using **Spring Boot** and JavaScript, enhancing accessibility and user experience
- Automated end-to-end testing for the web application using **Selenium** to ensure reliability across browsers
- GitHub link: <https://github.com/vitcorr/A1-kolawole-victor-101201377/tree/a3-4004>
